
1 BACKGROUND

Wärtsilä Puregas Solutions' Project Managers mainly work within their local geographical markets. We have PMs based in Denmark, UK, Ireland, Sweden and USA. As a result of an internal reorganisation, we are seeking to recruit a new Project Manager to cover the Nordic area – Sweden, Norway, Finland, though activities may include projects outside of Nordic.

Puregas Project Managers oversee the entire project delivery process, including supporting Sales with cost calculations and contract reviews, customer meetings, technical reviews, sourcing, managing and overseeing site installation of our plants and additional equipment, arranging commissioning, and contract management. The Project Manager is the main customer point of contact once the Sales process is complete, through to handover to Puregas' Aftermarket team.

It is a varied and demanding role, and requires excellent organisational skills, as well as technical ability and good people management skills.

2 BUSINESS DESCRIPTION

Wärtsilä Puregas Solutions design, assemble, install and commission CAPure biogas upgrading plants and also supply additional equipment such as high-pressure compressors, boilers, flares, H₂S removal systems etc. Puregas has been operating for more than 20 years and in October 2017 became a part of Wärtsilä.

Puregas has over 30 plants operating within Europe, has grown fast in recent years and intends to continue that growth both within Europe and further afield.

Biogas is produced from food waste, sewage, manure and crops and consists mainly of methane and carbon dioxide. To improve the energy content the gas is upgraded by removing the carbon dioxide. The upgraded biogas, Biomethane, can be used as vehicle fuel, injected into the gas grid or used for liquefaction (LBG).

3 JOB DESCRIPTION PROJECT MANAGER NORDIC

As Project Manager you will work in an international environment with a focus on plants supplied into the Nordic markets – Sweden, Norway, Finland. Dependent on customer requirements, there may be opportunities to work on projects elsewhere in Europe, or even further afield.

The Project Manager is the main customer point of contact once the Sales process is complete and is responsible for the delivery performance and financial performance of the project.

It is a varied and demanding role, and requires excellent organisational skills, as well as technical ability and good people management skills.

Description of main duties:

- Calculation of project costs (support to sales)
- Contract reviews
- Project planning personnel and resources

- Financial control and follow up on monthly basis
- Being the customer interface until take-over
- Source the CApure plant from Operations and additional equipment from other suppliers, including commissioning, aftermarket support.
- Manage site installation, commissioning and start-up, training, plant performance tests and hand-over (with internal support from Puregas' Aftermarket technicians)
- Technical support for work at site

The role will be based in our head office in Kalmar, but there may be opportunity to work from home at times. The role requires some travel, which varies dependent on customer requirements and site activities, but could be 30-50 days per year.

We have an experienced and enthusiastic team of engineers, project managers and process technicians with a 'can do' culture, and provide good support and training as needed.

4 PROFILE

We are looking for a background in Project Management or a strong desire to move into the Project Management field. Strong organisational, commercial and technical engineering (mechanical/process/construction) skills are important, as well as excellent people management skills – our Project Managers are the “face of Puregas” for our customers - as well as suppliers and sub-contractors.

You will need to be able to read, understand and manage complex contracts, communicate with customers at a technical level about the plant and process, and manage installation and commissioning staff on site.

Must be fluent in Swedish and English, and other languages could be advantageous.

Knowledge and/or experience within the following fields would be beneficial, but not compulsory:

- Project Management
- Anaerobic Digestion, Biogas processing.
- Mechanical and electrical installation of process plants
- Cost estimation for installation of process plant
- Contract negotiation and review
- Working in an Ex environment
